ENGENHARIA QUÍMICA

INSTRUMENTAÇÃO E CONTROLE DE QUALIDADE

Instalação Profissional do Spyder (2026)

Prof. Dr. E. R. Edwards

Objetivo da Aula

- Instalar o Spyder de forma profissional
- Evitar erros comuns
- Criar ambiente isolado e estável
- Preparar o computador para projetos científicos

Por que NÃO instalar Spyder via pip

- Conflitos de dependências
- Atualizações quebram o Spyder
- Problemas com Qt, PyQt e Matplotlib
- Instalação não gerenciada

Conclusão: *Instalar via Anaconda é o método profissional.*

pip é um gerenciador de pacotes

O que é o Anaconda

- Distribuição científica do Python
- Inclui gerenciador de pacotes (conda)
- Cria ambientes isolados
- Evita conflitos entre versões

Slide 5 — Download do Anaconda

Acesse: <https://www.anaconda.com/products/distribution>

Escolha:

- Windows
- Mac
- Linux

The screenshot shows the Anaconda website's 'Get Started' page. At the top is the Anaconda logo and a navigation bar with links for Products, Solutions, Resources, and Company. On the right, there are links for 'Sign In' and a green 'Get Demo' button. The main heading is 'Get Started with Anaconda Distribution'. Below it, a paragraph states: 'Install Python, Jupyter, and thousands of data science packages in one step. Trusted by over 50 million users who need tools that work—without the setup headaches.' A section titled 'What's included in Anaconda Distribution?' lists five features with checkmarks: 'Thousands of vetted Python packages with dependency management', 'Conda package and environment manager', 'Jupyter Notebook and JupyterLab', 'Desktop app (Navigator) or command line interface', and 'Works on Windows, macOS, and Linux'. A link to 'See documentation' is provided. On the right side, a 'Download Now' box offers 'Get Started' and 'Returning Users' buttons, with a 'Skip Registration' link below. A disclaimer at the bottom of this box states that use is subject to terms of service and that organizations with more than 200 employees/contractors may require a paid business license. A small chat bubble in the bottom right corner says 'Hi, how can I help?' with a red '1' icon.

Get Started with Anaconda Distribution

Install Python, Jupyter, and thousands of data science packages in one step. Trusted by over 50 million users who need tools that work—without the setup headaches.

What's included in Anaconda Distribution? ^

- ✓ Thousands of vetted Python packages with dependency management
- ✓ Conda package and environment manager
- ✓ Jupyter Notebook and JupyterLab
- ✓ Desktop app (Navigator) or command line interface
- ✓ Works on Windows, macOS, and Linux

[See documentation](#) for more details and step-by-step instructions.

Slide 6 — Instalação do Anaconda

- Execute o instalador
- Aceite os termos
- Instale para “Just Me”
- Mantenha o PATH desmarcado
- Concluir instalação

=> “Não marque o PATH. Se marcar, o Anaconda vira o Python principal do Windows e pode causar conflitos. Deixe desmarcado para manter o sistema limpo e profissional.”

Abrindo o Anaconda Navigator

- Menu Iniciar → Anaconda Navigator
- Aguarde carregar
- Interface gráfica com todos os apps

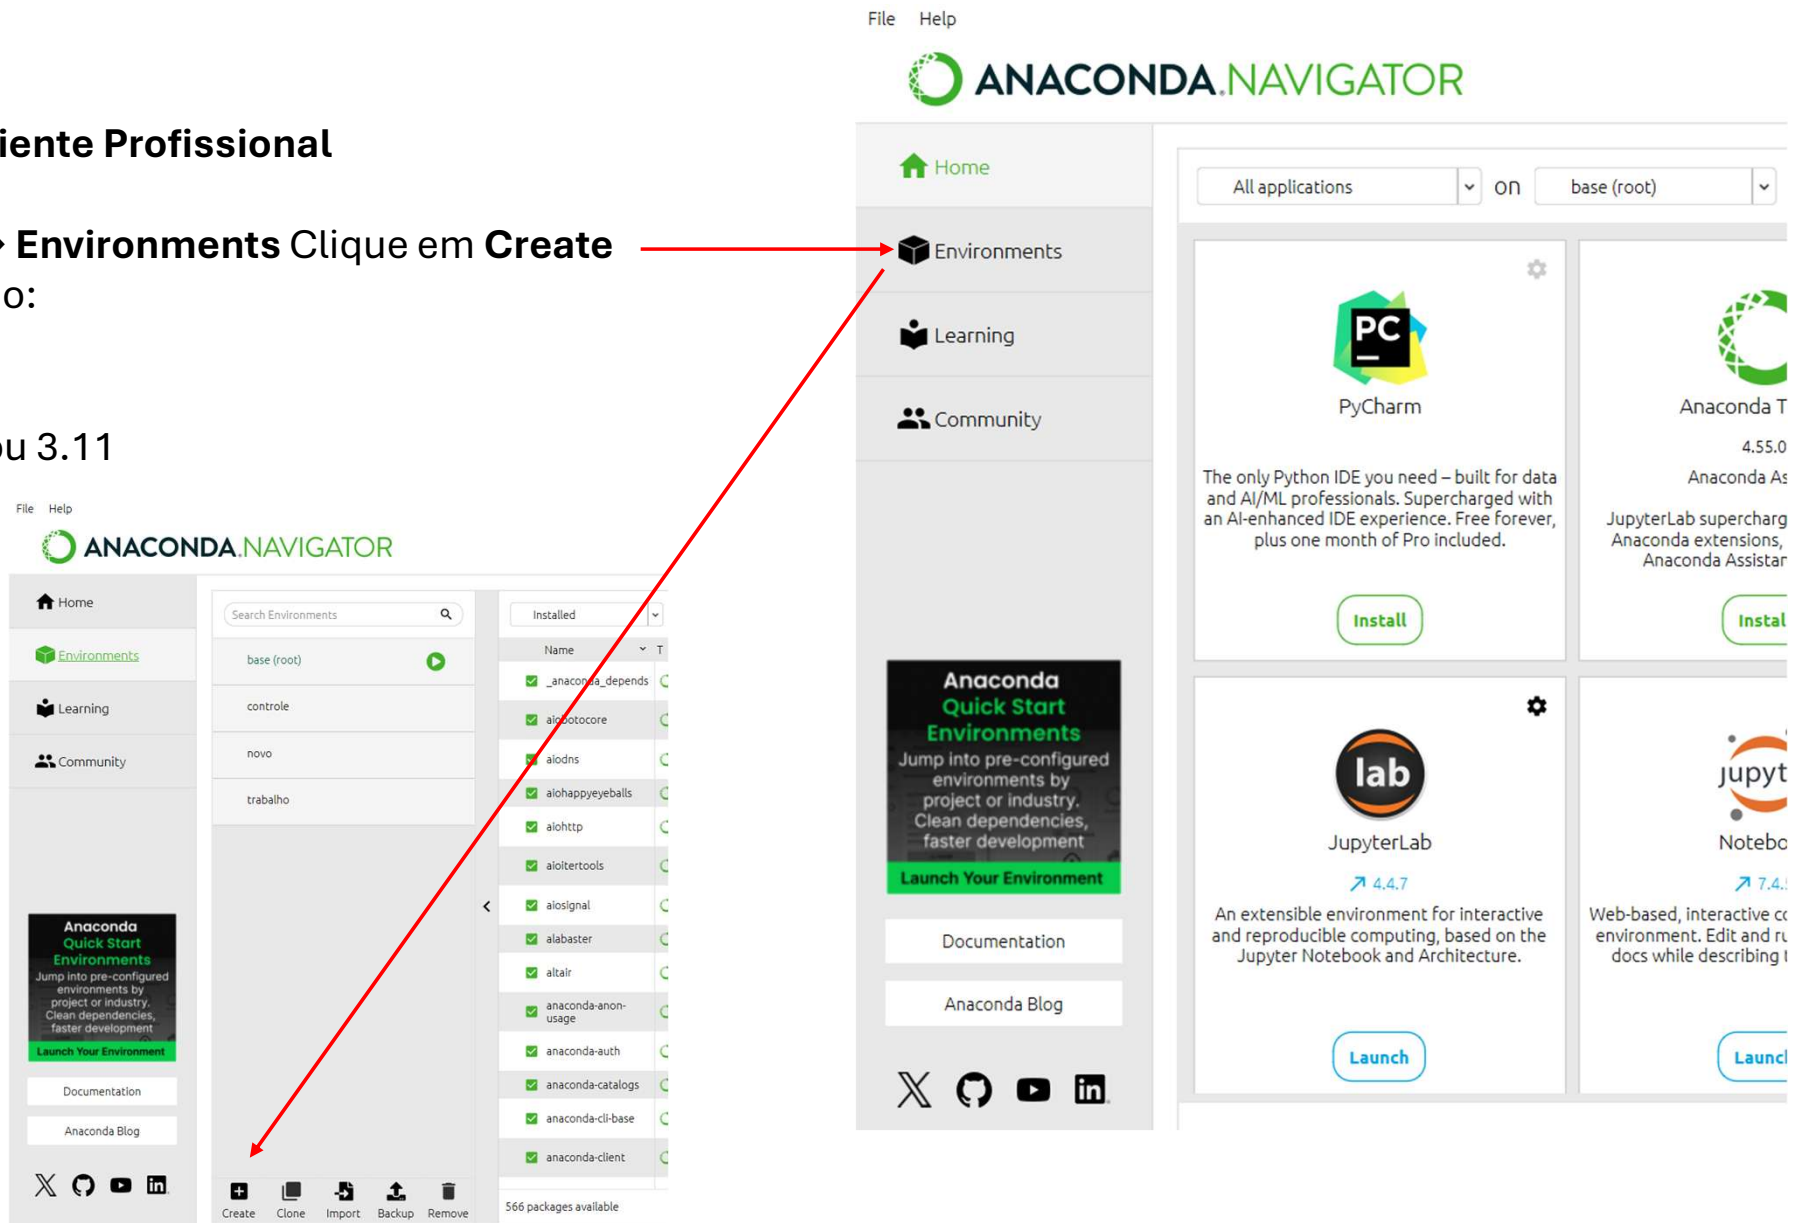

Criando Ambiente Profissional

Menu lateral → **Environments** Clique em **Create**

Nome sugerido:
spyder-env

Versão: 3.10 ou 3.11

1. O Anaconda já vem com Python embutido

Quando você instala o Anaconda, ele traz:

- Python (versão estável e compatível)
- Conda (gerenciador de ambientes)
- Bibliotecas científicas
- Ferramentas de desenvolvimento

Instalando o Spyder no Ambiente

Selecione o ambiente **spyder-env** Clique em **Open Terminal** Digite:

```
conda install spyder
```

Abrindo o Spyder

No Navigator:

- Selecione o ambiente
- Clique em **Launch**

Integração do VSCode com o Python do Anaconda

(Por que usar o VSCode com Anaconda?)

- VSCode é o editor mais usado no mercado
- Permite trabalhar com projetos maiores
- Funciona perfeitamente com ambientes Conda

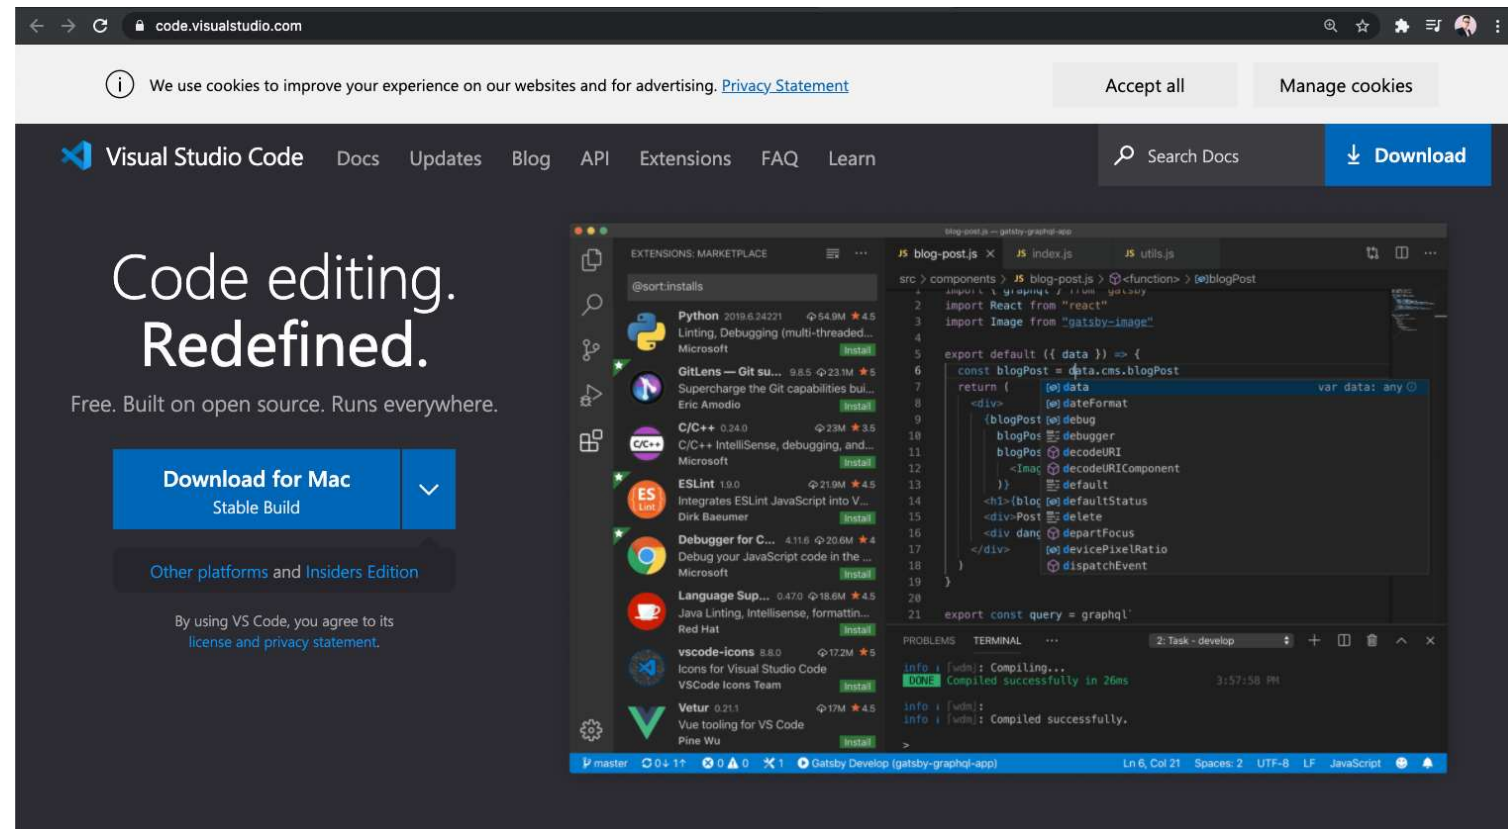

Visual Studio Code

Passo 1 — Instalar o VSCode

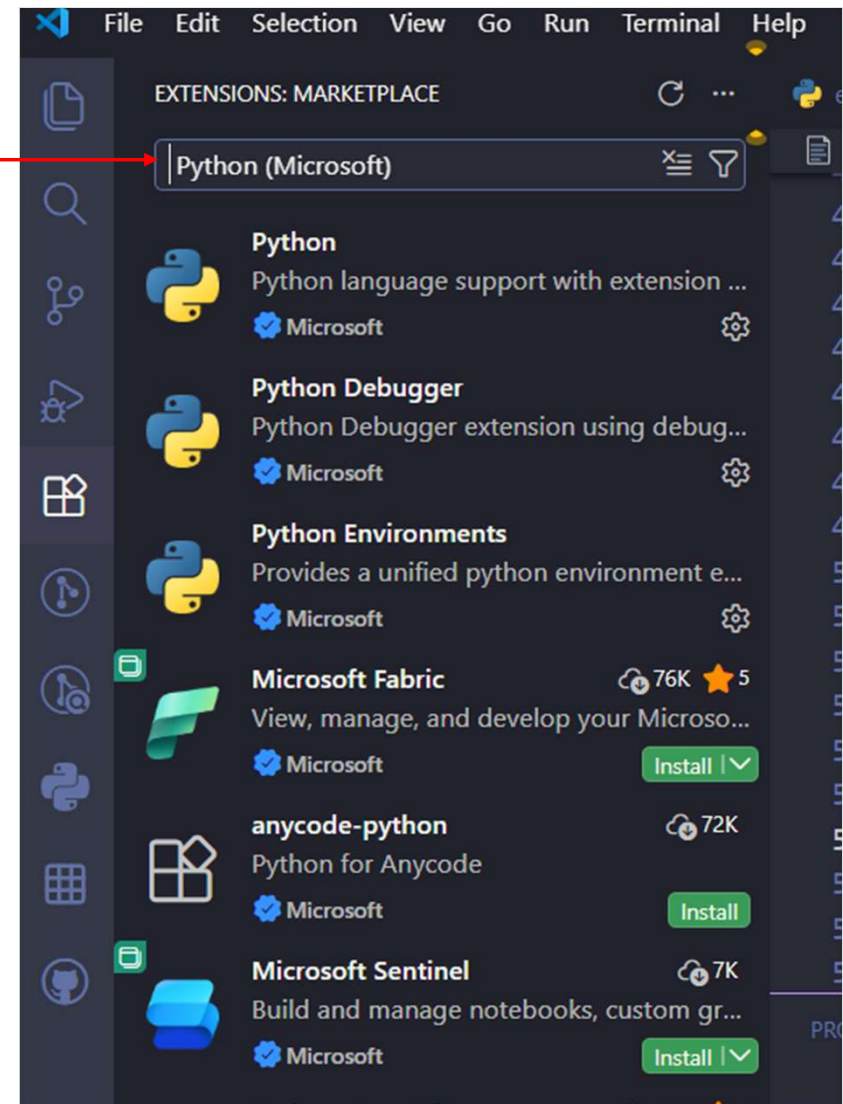

Baixe em: <https://code.visualstudio.com>

Instale com as opções padrão.

Passo 2 — Instalar a extensão Python

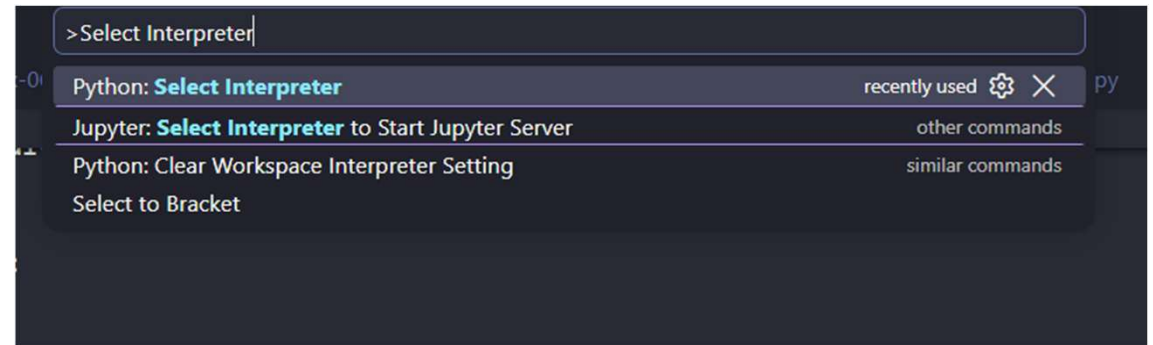

No VSCode: **View** → **Extensions** → **Python (Microsoft)** Clique em **Install**

Passo 3 — Selecionar o Python do Anaconda

No VSCode:

1. Pressione **Ctrl + Shift + P**
2. Digite: Python: Select Interpreter

Escolha o ambiente Conda que você criou, por exemplo:
(spyder-env) ...\\anaconda3\\envs\\spyder-env\\python.exe

Passo 4 — Confirmar

No terminal do VSCode, deve aparecer algo como:

(spyder-env) C:\Users\Aluno>

Passo 5 — Teste

Crie um arquivo `teste.py`:

```
import numpy as np
print(np.arange(10))
```

Resumo:

VSCode não escolhe o Python automaticamente

- Você precisa selecionar o interpretador
- Sempre escolha o ambiente Conda
- Assim, VSCode e Spyder usam o mesmo Python
- Zero conflitos, zero erros

Existem dois tipos de Spyder no Anaconda:

1. Spyder Global (Home)

- Instala no ambiente base
- Não é isolado
- Pode gerar conflitos
- Não recomendado para projetos científicos

2. Spyder do Ambiente Conda (profissional)

- Instalado dentro do ambiente criado pelo aluno
- Usa o Python correto
- Evita conflitos
- É o padrão profissional
- É o que vamos usar no curso
